

DWS Aesthetic ARCHWIRES * Patent Pending

Acme Monaco's DWS Aesthetic ARCHWIRES address voiced concerns throughout the industry regarding the long term use and durability of aesthetic archwires.

Acme Monaco Corporation has been selling coated aesthetic archwires for more than 20 years and has successfully met the needs of much of the market. We acknowledge the fact that the highly efficient archwires of today now push the allowable interval between patient visits, putting a high demand on the aesthetic archwires of the past. Evidence shows that many coated and plated aesthetic archwires fail to meet intervals of 8 -12 weeks of patient use. This is where our DWS Aesthetic ARCHWIRES excel!

You can now have an aesthetic archwire without the worries. Our in-house developed patent-pending process allows us to offer you, our customer, the highest durability in an aesthetic archwire, free of any plating or coatings.

Currently available in :

- Stainless Steel, S/E Niti, and Thermal Niti
- Round, square and rectangular wire sizes
- Variety of archforms to meet your needs

WHAT YOU SHOULD DEMAND FROM AN AESTHETIC ARCHWIRE (and will receive with DWS)

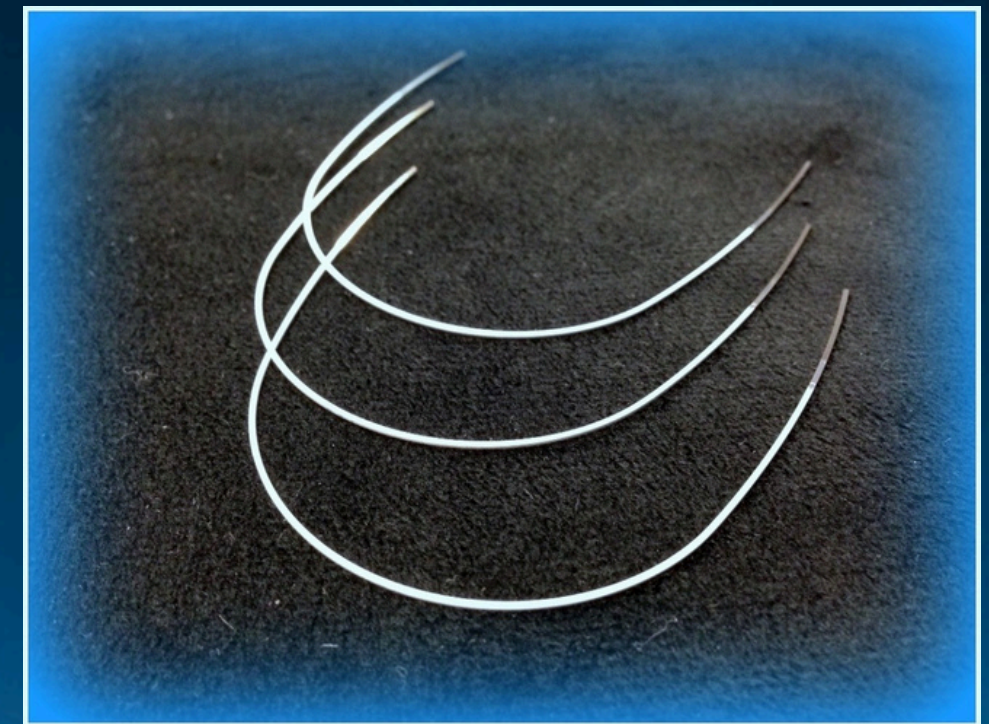

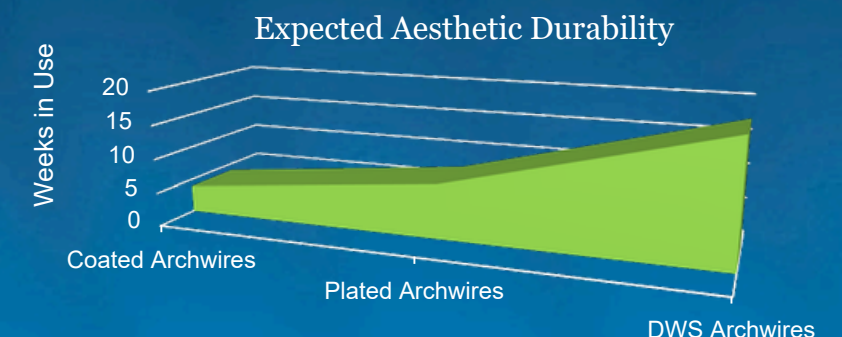

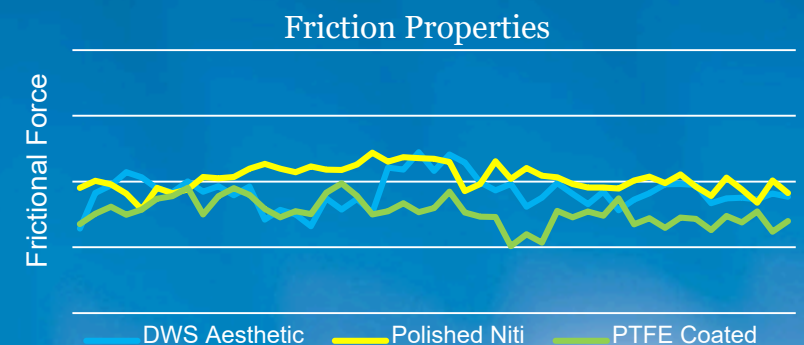

Superior Aesthetics –A product with an aesthetic balance that blends in with varying tooth shades.

Ultra Durability –Archwires that will remain aesthetic in the patient's mouth for more than 12 weeks. No delamination, chipping, flaking etc.

Clinically Accurate –Aesthetic archwires that have force properties identical to their non-aesthetic peers.

Stain Free –Archwires impervious to staining due to elements encountered in the oral cavity.

Low friction –Archwires with similar frictional forces of their non-aesthetic peers.
